

How does RoadCoach work?

1

Before:
plan the drive

The teacher opens RoadCoach in the Tesla app, reviews the learner's roadmap, picks today's skills, and gets an AI-suggested route.

2

During:
coach quietly

The Tesla display stays minimal for the learner. The teacher coaches from the app. The car's sensors record the drive in the background.

3

After:
see progress

The drive becomes a summary and updates the learner's skill map.
